What should I know about the delta variant?

Associated Press

It's a version of the coronavirus that has been found in more than 80 countries since it was first detected in India. It got its name from the World Health Organization, which names notable variants after letters of the Greek alphabet.

Experts say the delta variant spreads more easily because of mutations that make it better at latching onto cells in our bodies. In the United Kingdom, the variant is now responsible for 90% of all new infections. In the U.S., it represents 20% of infections, and health officials say it could become the country's dominant type as well.

It's not clear yet whether the variant makes people sicker since more data needs to be collected, said Dr. Jacob John, who studies viruses at the Christian Medical College at Vellore in southern India.

Studies have shown that the available vaccines work against variants, including the delta variant.

The vaccines were protective for those who got both doses but were less so among those who got one dose.

It's why experts say it's important to be fully vaccinated. And it's why they say making vaccines accessible globally is so critical.

Summer Snow Threatens Colorado Auto Race

Participants in the second oldest auto race in U.S. drive a course covering more than 12 miles with 156 turns, Denver television station KCNC reported. The race ends at the summit of Pikes Peak at an elevation of more than 14,000 feet.

The National Weather Service forecast said snow was likely throughout the weekend, with several inches possible late Saturday and early Sunday.

Please arrive 10 minutes early and park your car in the lot accessible from the Broadway street entrance. The class is located in the field between this parking lot and the circle.
